Veggie Burger DB

<https://afternoon-waters-49130.herokuapp.com/>

<https://github.com/lobo89x/burger.git>

A simple example of mysql and handlebars in harmony. I used it to keep track of all the veggie burgers I have been trying

MySQL, handlebars, JQuery

Experience

Solutions/Services Engineer

Racami, Norcross, Ga

Integrated vendor software with in-house development, trained support staff teams both foreign and domestic, reviewed and debugged software leading to better processing proficiency and improving server workload capability.

May 2014 – Current

- Provided analysis, diagnostics, and resolution strengthening the company reputation in support and services for 4 clients at a time dealing with 5-10 actionable items per week.
- Managed client support and services in person and remotely for lengthy periods between 4 weeks and 9 months, resulting in higher client satisfaction and resolving issues protecting the client from penalties.

Production Assistant

Transproma, Norcross, Ga

Programmed composition software to facilitate print projects, maintained customer relations, lead project presentations to existing and potential clients, managed quality assurance team leading to better client relations and future projects.

December 2012 – Current

- Organized and lead backend 3 to 4 person team development debugging, leading to higher quality assurance and higher customer satisfaction on more than 7 clients.
- Generated solutions to prolonged system development issues, leading to improved efficiency used in over 10 clients.
- Managed QA team for final print productions, helping pick out issues that client QA team missed and advising adjustments to better accommodate client desires and need with printing standards as a standard service for over 7 clients on a monthly to quarterly basis.
